

Supplementary Material

Supplementary Movie Legends

Supplementary Movie 1. Spinning-disc confocal microscopy of F-actin dynamics in etiolated hypocotyl epidermal cells treated with the solvent control solution. Each frame was taken every 1 second and the total elapsed time is 1 minute.

Supplementary Movie 2. Spinning-disc confocal microscopy of F-actin dynamics in etiolated hypocotyl epidermal cells treated with 5 μ M eBL. Each frame was taken every 1 second and the total elapsed time is 1 minute.
